

MortalityLaws Installation

Marius D. Pascariu

December 1, 2017

The package can be installed from two different sources, CRAN and GitHub. Most people would choose the first option (see below).

1 Install stable version from CRAN

The `MortalityLaws` package can be installed from CRAN as follows:

1. Make sure you have the most recent version of R
2. Run the following code in your R console

```
install.packages("MortalityLaws")
```

2 Install development version from GitHub

The latest version can be installed from author's GitHub repository by running the following code in your R console:

```
# install.packages("devtools")  
devtools::install_github("mpascariu/MortalityLaws")
```

In this case you will need to have `devtools` R package already installed, otherwise uncomment the first line and install it.

Now you are ready to go. Happy modelling!

Check the other vignettes and examples provided in the help pages.
